

Classification: Internal – Demo Data

Purpose

Defines documentation requirements for engineering calculations.

Requirements

Engineering calculations should clearly show:

1. Problem statement
2. Given parameters
3. Assumptions
4. Applicable formulas
5. Calculation steps
6. Units
7. Results
8. Safety/design margin where applicable
9. Engineering conclusion

Verification

Calculations affecting safety, equipment integrity or major expenditure should be independently reviewed by an authorized engineer.

AI Assistance

AI-generated calculations must be treated as draft material.

The responsible engineer must verify:

- Input values
- Formula selection
- Units
- Numerical calculations
- Engineering assumptions
- Final recommendation

AI output must not automatically be treated as an approved engineering decision.

Internal AI Assistant Usage Guideline
