

Classification: Internal – Demo Data

Purpose

Defines acceptable usage of internally hosted AI assistants for organizational knowledge work.

Approved Use Cases

The internal AI assistant may be used for:

- Document summarization
- Drafting approval notes
- Searching internal documentation
- Preparing presentation drafts
- Extracting information from reports
- Spreadsheet analysis
- Code generation
- Code review
- OCR-assisted document analysis
- Internal knowledge retrieval

Data Sovereignty

Sensitive organizational information must remain within the organization's approved computing environment.

The AI system must not send organizational documents, prompts or generated content to external AI APIs.

Knowledge Retrieval

When answering questions related to organizational procedures, the AI assistant should first retrieve relevant documents from the internal knowledge base.

The assistant should:

1. Identify relevant documents.
2. Retrieve relevant sections.
3. Use retrieved information to formulate the response.
4. Clearly indicate when sufficient information cannot be found.
5. Avoid inventing organizational policies.

Human Verification

AI-generated outputs are drafts unless explicitly reviewed and approved by an authorized employee.
