

Inspection Report Preparation Guideline

Document ID: DUMMY-INS-002

Version: 1.1

Classification: Internal – Demo Data

Purpose

Defines the standard structure for preparing equipment inspection reports.

Required Information

Every inspection report should contain:

- Equipment identification number
- Inspection date
- Inspector name/designation
- Equipment location
- Inspection method
- Observations
- Measurements
- Photographs where applicable
- Defects identified
- Risk assessment
- Recommended corrective action

Severity Classification

Critical

A condition that may immediately affect personnel safety or major equipment integrity.

Major

A condition requiring timely corrective action but not representing an immediate emergency.

Minor

A condition that should be monitored or corrected during planned maintenance.

Recommended Action

Each identified defect must have:

- Description
- Severity
- Recommended action
- Responsible department
- Target completion date

Review Process
